

## **COURSE CMII-06**

### **CMII Implementation and Application**

#### **Abstract:**

This course describes how to evaluate your organizational readiness for implementing CMII or perhaps reviving a previous implementation effort.

Those with minimal support must proceed slowly. Those with strong support can be more aggressive. A good plan is essential.

This course describes how to select the appropriate implementation team and define the destination. It describes how to conduct an assessment and use the results to prepare a transition plan.

The first day includes workshops wherein students will simulate the steps needed to prepare the appropriate transition plan. The second day includes workshops wherein students will simulate the actual transition phase and management of the application process.

Job descriptions are provided for each of five key positions. Recommended metrics for monitoring performance and guiding continuous improvement are also provided.

Students leave this course knowing what to do and how to do it.

#### **Outline:**

##### **CMII DESTINATION AND TRANSITION PLAN**

- A. **CMII implementation Plans & Approaches**  
*W/S (1) Organizational Readiness for CMII*
